

# Pretend Pensions

Just How Much Are California's Public  
Employee Retirement Funds Underwater?

And Where Does Marin Fall?

Joe Nation, Ph.D.  
Professor of Public Policy  
Stanford University  
Sept. 22, 2010

# Stanford's Public Policy Program And Practicum

- Practicum combines with International Policy Studies (IPS)
  - Students are MPP, MBA, JD, IPS, or Ph.D. candidates
- Projects (and clients) include:
  - Human Trafficking In India (Asia Foundation)
  - Prosecutorial Discretion in the Filing of Criminal Charges (National Center on State Courts)
  - U.S. Counterinsurgency Strategy in Afghanistan (U.S. Army)
  - The Distributional Effects of a Carbon Tax (Carnegie Foundation)
  - Predicting Judicial Performance (Commission on Judicial Performance)
  - Developing a Sovereign Fiscal Responsibility Index (Peterson Foundation)

# California's State Public Employee Pensions Are Underfunded By \$500 Billion

[Quantifying Shortfall](#)

[Methodology](#)

[How We Got Here](#)

[Marin](#)

[Digging Out](#)

- Published by SIEPR in April 2010
- Research conducted by five former students
  - Now employed at Goldman Sachs, Bain Capital, a local start-up, and a small local investment bank
- John Shoven (SIEPR Director) and I served as Faculty Advisors
- Completed for Governor's Office
- Snapshot of CalPERS, CalSTRS, and UCRS
- Shortfall equivalent to about 6 state budgets

# How We Got To Half A Trillion

Quantifying Shortfall

Methodology

How We Got Here

Marin

Digging Out

|         | Reported, 2008 |                   |                             |               | Stanford Estimate |                   |                             |               |
|---------|----------------|-------------------|-----------------------------|---------------|-------------------|-------------------|-----------------------------|---------------|
|         | Discount rate  | Liabilities (AAL) | Unfunded liabilities (UAAL) | Funding ratio | Discount rate     | Liabilities (AAL) | Unfunded liabilities (UAAL) | Funding ratio |
| CalPERS | 7.75%          | \$277,246         | \$38,679                    | 86.0%         | 4.14%             | \$478,256         | \$239,689                   | 49.9%         |
| CalSTRS | 8%             | \$177,734         | \$16,236                    | 90.8%         | 4.14%             | \$318,177         | \$156,679                   | 50.7%         |
| UCRS    | 7.50%          | \$42,576          | \$553                       | 98.7%         | 4.14%             | \$70,765          | \$28,742                    | 59.3%         |
| Total   |                | 497,556           | <b>\$55,468</b>             |               |                   | 867,198           | <b>\$425,110</b>            |               |

Including 2008-2009 losses (\$109.8 billion), estimated shortfall about \$525 billion

# But Aren't These Unrealistic Estimates?

Quantifying Shortfall

Methodology

How We Got Here

Marin

Digging Out

- Northwestern University recently estimated a \$475 billion shortfall for California; \$4-5 trillion for U.S.
  - Pew Center estimated \$1 trillion for U.S.
- Funds themselves now acknowledge larger shortfalls
  - CalPERS asking for bigger General Fund contributions
  - CalSTRS seeking \$4 billion per year based on recent actuarial report
  - UCRS now estimates \$28 billion retirement and OPEB shortfall
    - Among solutions: employees contribute 4-10%, up from 2-5%

Note: 2010-11 are estimates.

# Pension Fund Health Depends In Part On How We Value Future Liabilities

Quantifying Shortfall

Methodology

How We Got Here

Marin

Digging Out

- We use discount rates to assign a present value (PV) to future payments
- What is the value today of a stream of future payments?
  - Similar to a Lottery winner
  - Do I take the \$200,000/year for life or a lump sum of \$3 million?

# How We Value Future Liabilities Depends On Discount Rates

Quantifying Shortfall

*Methodology*

How We Got Here

Marin

Digging Out

- A \$1 billion obligation spread over 18 years at 4% = PV \$494 million
- The same \$1 billion obligation at 8% = PV \$250 million
- GASB requires agencies to match discount rates and expected rates of return
  - So CalPERS, others discount at 7.5%-8.0%
- Strong argument to discount at a risk-free rate, or at the TIPS rate, currently 2%

# GASB's Rules Don't Make Financial Sense For Defined Benefit Plans

Quantifying Shortfall

Methodology

How We Got Here

Marin

Digging Out

- Most public employees retire with legally, contractually guaranteed income
- Case law is clear
- So fund liabilities are related to required payments to retirees, not investments or rates of return
  - E.g., if the fund's rate of return doubles, does the obligation to the retiree change?
  - How would you plan for a personal obligation that you *must* pay in 10 years?

# Others Argue For “Risk-Free” Discount Rates

Quantifying Shortfall

*Methodology*

How We Got Here

Marin

Digging Out

- Professors Joshua Rau (Northwestern) and Robert Novy-Marx (University of Chicago)
- Alicia Munnell, (Boston College, Pres. Clinton Council of Economic Advisors)
- Donald Kohn (Vice Chair, Federal Reserve)
  - "Public pension benefits are essentially bulletproof promises to pay. The only appropriate way to calculate the present value of a very-low-risk liability is to use a very-low-risk discount rate..... [Any other method] pushes the burden of financing today's pension benefits onto future taxpayers, who will be called upon to fund the true cost of existing pension promises."

# Let's Assume A Discount Rate of 6% (Using 2008 Fund Data)

|                       |                    |                 |       |             |
|-----------------------|--------------------|-----------------|-------|-------------|
| Quantifying Shortfall | <i>Methodology</i> | How We Got Here | Marin | Digging Out |
|-----------------------|--------------------|-----------------|-------|-------------|

|         | Fund    | Liabilities (AAL) | Actuarial Value of Assets (AVA) | Unfunded liabilities (UAAL) | Funding ratio |
|---------|---------|-------------------|---------------------------------|-----------------------------|---------------|
| CalPERS | CalPERS | \$360,286         | 238,567                         | -121,719                    | 66.2%         |
| CalSTRS | CalSTRS | \$239,694         | 161,498                         | -78,196                     | 67.4%         |
| UCRS    | UCRS    | \$53,310          | 42,023                          | -11,287                     | 78.8%         |
| Total   | Total   | \$653,290         | 442,088                         | -\$211,202                  | 67.7%         |

# This Financial Disaster Accelerated In 1999 With SB 400

Quantifying\_Shortfall

Methodology

How We Got Here

Marin

What's Next

- Public employee unions learned to work both sides of the aisle
  - Prison guards, police/law enforcement, firefighters
- SB 400 expanded benefits
  - CalPERS pledged “no increase over current employer contributions is needed for these benefit improvements”
  - SB 400 passed with only 7 of 120 “no” votes
- Many now earn more in retirement than when active
  - A public safety employee *without spiking* can earn 60% more (in nominal dollars) in retirement than while on active duty

# The Funds Failed Retirees And Taxpayers

Quantifying Shortfall

Methodology

How We Got Here

Marin

What's Next

- When funding ratios dropped, funds failed to contribute sufficiently
  - UCRS is just ending a nearly 20 year “contribution holiday”
- Funds bet on the market--and lost
  - CalPERS requires market to double every 9 years
  - Bet on 25,000 Dow Jones by 2009; down 5.1% since Oct. 1, 2000
- Funds are far from transparent
  - CalPERS ignored our requests for information, even Public Records Act requests
  - CalPERS failed to disclose the possible downside of increased benefits with SB 400
- And BTW, political leaders failed miserably, as well

# CalPERS, CalSTRS Have Criticized the Stanford Study

- Old data
  - CalPERS rejected our request(s)
  - New data suggests problem even worse
- Argue that not even Stanford uses a risk-free discount rate
  - And for good reason.....we don't guarantee pensions
- Governor's office paid for study
  - Work done free of charge

# Thank Goodness We Have Our Own Fund Here In Marin

Quantifying Shortfall

Methodology

How We Got Here

Marin

What's Next

- Most Marin cities, special districts are CalPERS members
- But MCERA (the County, San Rafael, and the Novato Fire Protection District) operates independently
  - There are 22 1937 Act counties in California that also have separate pension funds

# But MCERA Unfunded Liabilities Range From \$1-\$3.5 Billion

# How To Dig Out

Quantifying Shortfall

Methodology

How We Got Here

Marin

What's Next

- Acknowledge the problem
  - Beneficiaries, public employee unions continue to seek increases
- Involve the community, stakeholders
- Recognize that minor fixes will *not* work
  - E.g., 5th tier won't matter (in short- to medium-term) if you're not hiring
  - Employees will have to contribute more
  - Avoid contribution "holidays"
  - Plan for the long term
  - Avoid issuing debt
  - Don't "spread" asset losses over long period
